(b) (i) Redistribution of Service Department's expenses using 'Simultaneous equation method'

$$X = 9,20,000 + 0.05 Y$$

$$Y = 11,40,000 + 0.20 X$$

Substituting the value of X,

$$Y = 11,40,000 + 0.20 (9,20,000 + 0.05 Y)$$

$$= 13,24,000 + 0.01 Y$$

$$Y - 0.01Y = 13,24,000$$

$$Y = \frac{13,24,000}{0.99}$$

$$Y = ₹ 13,37,374$$

The total expense of Y is ₹ 13,37,374 and that of X is ₹ 9,86,869 i.e., ₹ 9,20,000 + (0.05 × ₹ 13,37,374).

Working Note:

Cost of Goods sold = $2,70,000 \times 80/100 = ₹ 2,16,000$

7. (i) Computation of Optimum Run size of 'Stents' or Economic Batch Quantity (EBQ)

$$\text{Economic Batch Quantity (EBQ)} = \sqrt{\frac{2DS}{C}}$$

Where, D = Annual demand for the Stents
 = 1,00,00,000 × 10% = 10,00,000 units
 S = Set- up cost per run
 = ₹ 450
 C = Carrying cost per unit per annum
 = ₹ 3 × 12 = ₹ 36

$$\begin{aligned} \text{EBQ} &= \sqrt{\frac{2 \times 10,00,000 \times ₹ 450}{₹ 36}} \\ &= 5,000 \text{ units of Stents} \end{aligned}$$

(ii) Minimum inventory holding cost

Minimum Inventory Cost = Average Inventory × Inventory Carrying Cost per unit per annum
 = (5,000 ÷ 2) × ₹ 36
 = ₹ 90,000

(iii) Calculation of the extra cost due to manufacturing policy

	When run size is 6,000 units	When run size is 5,000 units i.e. at EBQ
Total set up cost	$\frac{10,00,000}{6,000} \times ₹ 450$ = ₹ 75,000	$\frac{10,00,000}{5,000} \times ₹ 450$ = ₹ 90,000
Total Carrying cost	$\frac{1}{2} \times 6,000 \times ₹ 36$ = ₹ 1,08,000	$\frac{1}{2} \times 5,000 \times ₹ 36$ = ₹ 90,000
Total Cost	₹ 1,83,000	₹ 1,80,000

Extra cost = ₹ 1,83,000 - ₹ 1,80,000 = ₹ 3,000

8. (i) Calculation of Overhead Recovery Rate:

$$\begin{aligned} \text{Factory Overhead Recovery Rate} &= \frac{\text{Factory Overhead in 2020-21}}{\text{Direct labour cost in 2020-21}} \times 100 \\ &= \frac{\text{₹ } 30,80,000}{\text{₹ } 90,50,000} \times 100 = 34\% \text{ of Direct labour} \end{aligned}$$

$$\begin{aligned} \text{Administrative Overhead Recovery Rate} &= \frac{\text{Administrative Overhead in 2020-21}}{\text{Factory cost in 2020-21 (W.N)}} \times 100 \\ &= \frac{\text{₹ } 20,50,400}{\text{₹ } 2,96,80,000} \times 100 = 6.91\% \text{ of Factory Cost} \end{aligned}$$

Working Note: Calculation of Factory Cost in 2020-21

11. Working Notes:

1. Calculation of Standard Man hours

When 100 workers work for 1 hour, the standard output is 50 units.

$$\text{Standard man hours per unit} = \frac{100 \text{ hours}}{50 \text{ units}} = 2 \text{ hours per unit}$$

2. Calculation of standard man hours for actual output:

$$= 1,920 \text{ units} \times 2 \text{ hours} = 3,840 \text{ hours.}$$

3. Calculation of actual cost

Type of Workers	No of Workers	Actual Hours Paid	Rate (₹)	Amount (₹)	Idle Hours (5% of hours paid)	Actual hours Worked
Group 'A'	10	400	12.40	4,960	20	380
Group 'B'	30	1,200	12	14,400	60	1,140
Group 'C'	60	2,400	11.40	27,360	120	2,280
	100	4,000		46,720	200	3,800

4. Calculation of Standard wage Rate:

Labour Efficiency Variance	= 480F
(Standard hours for Actual production – Actual Hours) x SR	= 480F
(3,840 – 3,800) x SR	= 480
Standard Rate (SR)	= ₹ 12 per hour

(i) Total Labour Cost Variance

$$= (\text{Standard hours} \times \text{Standard Rate}) - (\text{Actual Hours} \times \text{Actual rate})$$

$$= (3,840 \times 12) - 46,720 = \mathbf{640A}$$

(ii) Total Labour Rate Variance

$$= (\text{Standard Rate} - \text{Actual Rate}) \times \text{Actual Hours}$$

$$\text{Group 'A'} = (12 - 12.40) 400 = 160A$$

$$\text{Group 'B'} = (12 - 12) 1,200 = 0$$

$$\text{Group 'C'} = (12 - 11.40) 2,400 = \mathbf{1,440F}$$

$$\mathbf{1,280F}$$

(iii) Total Labour Gang Variance

$$= \text{Total Actual Time Worked (hours)} \times \{\text{Average Standard Rate per hour of Standard Gang} - \text{Average Standard Rate per hour of Actual Gang@}\}$$

@ on the basis of hours worked

$$= 3,800 \times \left(12 - \frac{3,840 \times 12}{3,800} \right)$$

$$= \mathbf{0}$$

[Note: As the number of workers in standard and actual is the same, there is no difference in mix ratio, so labour gang variance will be NIL]

(iv) Total Labour Yield Variance

$$= \text{Average Standard Rate per hour of Standard Gang} \times \{\text{Total Standard Time (hours)} - \text{Total Actual Time worked (hours)}\}$$

$$= 12 \times (3,840 - 3,800)$$

$$= \mathbf{480F}$$

(v) Total Labour idle time variance

$$= \text{Total Idle hours} \times \text{standard rate per hour}$$

$$= 200 \text{ hours} \times 12$$

$$= \mathbf{2,400A}$$

14. (a) **Controllable costs and Uncontrollable costs:** Cost that can be controlled, typically by a cost, profit or investment centre manager is called controllable cost. Controllable costs incurred in a particular responsibility centre can be influenced by the action of the executive heading that responsibility centre.

Costs which cannot be influenced by the action of a specified member of an undertaking are known as uncontrollable costs.

- (b) **Cost plus contract:** Under cost plus contract, the contract price is ascertained by adding a percentage of profit to the total cost of the work. Such types of contracts are entered into when it is not possible to estimate the contract cost with reasonable accuracy due to unstable condition of material, labour services etc.

Following are the advantages of cost plus contract:

- (i) The contractor is assured of a fixed percentage of profit. There is no risk of incurring any loss on the contract.
 - (ii) It is useful specially when the work to be done is not definitely fixed at the time of making the estimate.
 - (iii) Contractee can ensure himself about the 'cost of contract' as he is empowered to examine the books and documents of the contractor to ascertain the veracity of the cost of contract.
- (c) In integrated accounting system cost and financial accounts are kept in the same set of books. Such a system will have to afford full information required for Costing as well as for Financial Accounts. In other words, information and data should be recorded in such a way so as to enable the firm to ascertain the cost (together with the necessary analysis) of each product, job, process, operation or any other identifiable activity. It also ensures the ascertainment of marginal cost, variances, abnormal losses and gains. In fact all information that management requires from a

system of Costing for doing its work properly is made available. The integrated accounts give full information in such a manner so that the profit and loss account and the balance sheet can be prepared according to the requirements of law and the management maintains full control over the liabilities and assets of its business.

Since, only one set of books are kept for both cost accounting and financial accounting purpose so there is no necessity of reconciliation of cost and financial accounts.

- (d) The impact of IT in cost accounting may include the following:
- (i) After the introduction of ERPs, different functional activities get integrated and as a consequence a single entry into the accounting system provides custom made reports for every purpose and saves an organisation from preparing different sets of documents. Reconciliation process of results of both cost and financial accounting systems become simpler and less sophisticated.
 - (ii) A move towards paperless environment can be seen where documents like Bill of Material, Material Requisition Note, Goods Received Note, labour utilisation report etc. are no longer required to be prepared in multiple copies, the related department can get e-copy from the system.
 - (iii) Information Technology with the help of internet (including intranet and extranet) helps in resource procurement and mobilisation. For example, production department can get materials from the stores without issuing material requisition note physically. Similarly, purchase orders can be initiated to the suppliers with the help of extranet. This enables an entity to shift towards Just-in-Time (JIT) approach of inventory management and production.
 - (iv) Cost information for a cost centre or cost object is ascertained with accuracy in timely manner. Each cost centre and cost object is codified and all related costs are assigned to the cost object or cost centre. This process automates the cost accumulation and ascertainment process. The cost information can be customised as per the requirement. For example, when an entity manufactures or provide services, it can know information job-wise, batch-wise, process-wise, cost centre wise etc.
 - (v) Uniformity in preparation of report, budgets and standards can be achieved with the help of IT. ERP software plays an important role in bringing uniformity irrespective of location, currency, language and regulations.
 - (vi) Cost and revenue variance reports are generated in real time basis which enables the management to take control measures immediately.
 - (vii) IT enables an entity to monitor and analyse each process of manufacturing or service activity closely to eliminate non-value-added activities.

The above are examples of few areas where Cost Accounting is done with the help of IT.
